

## Project Aim

To assess, develop and design an appropriate, cost-effective and sustainable flood relief scheme that is technically, socially, environmentally and economically acceptable and aims to reduce flood risk to Castleconnell.

## Project Programme

## Purpose of this Public Participation Event

The goal of this public participation event is to offer a detailed insight into our identified preferred option, facilitate engagement with our project team, and gather valuable feedback from interested parties before the final planning submission.

## Preferred Scheme

Three emerging options were presented to the public at the Public Participation Day in September 2022. Following the feedback from the event, the preferred option (presented previously as Option 2) was identified.

The preferred option includes flood walls, embankments, road raising, flood gates from Rivergrove B&B to Coolbane Woods, and stream maintenance and culvert upgrade works along the Cedarwood Stream.

This option is presented in detail in the posters around the room and on the slideshow at the top of the room.
